Application/Control Number: 10/564,743

Art Unit: 1614

An Information Disclosure Statement filed January 17, 2006 is acknowledged and has been reviewed.

Claims 1-7 are presented and represent all of the claims under consideration.

Claim 3 is objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicants are required to cancel the claim, or amend the claim to place the claim in proper dependent form, or rewrite the claim in independent form. Intended use confers no patentable weight to composition claims. Applicants are not entitled to procure claims based on discovery that known compositions can be adapted to new uses. See *In re Hack*, 114 USPQ 161 (CCPA 1957).

Claims 1, 3, 4, 6 and 7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which Applicants regard as the invention.

In claims 1, 4 and 6 the term "general", relating to the formula depicted in the claims, has no probative value and should be deleted.

The recitation "at least one selection from the group consisting of" in claims 1, 4 and 6 lacks clarity. It is unclear to what "one" is referring. Applicants may instead consider -- comprising administering a thiazole compound of formula (1) --.

The recitations "which may have 1 to 3 alkoxy groups" and "which may have 1 to 3 carboxyl groups" in claims 1, 4 and 6 are vague and indefinite. The term "optionally" is preferred.

Application/Control Number: 10/564,743 Page 3

Art Unit: 1614

Claims 6 and 7 provide for the use of a compound for the production of a medicament for treating inflammatory bowel diseases, but, since the claim does not set forth any steps involved in the method/process, it is unclear what method/process applicant is intending to encompass. A claim is indefinite where it merely recites a use without any active, positive steps delimiting how this use is actually practiced.

Claims 6 and 7 are rejected under 35 U.S.C. 101 because the claimed recitation of a use, without setting forth any steps involved in the process, results in an improper definition of a process, i.e., results in a claim which is not a proper process claim under 35 U.S.C. 101. See for example *Ex parte Dunki*, 153 USPQ 678 (Bd. App. 1967) and *Clinical Products, Ltd.* v. *Brenner*, 255 F. Supp. 131, 149 USPQ 475 (D.D.C. 1966).

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Application/Control Number: 10/564,743

Art Unit: 1614

Claims 4-7 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 11 and 12 of U.S. Patent No. 6,291,487. Although the conflicting claims are not identical, they are not patentably distinct from each other because claim 12 in the patent recites the same compound as presently recited in claims 5 and 7 for use in the treatment of Crohn's disease, an inflammatory bowel disease. Intrarectal administration is disclosed in column 10, lines 19-20.

Claims 1-3 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-6 of copending Application No. 10/424904. Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 4-6 in the co-pending application recite the same compound as instant claim 2. On page 23 of the specification of the co-pending application intrarectal administration is taught. Applicants are not entitled to procure claims based on discovery that known compositions can be adapted to new uses.

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Banan et al., Free Radical Biology & Medicine.

Art Unit: 1614

Banan teaches local administration of the compound OPC-6535, 6-[2-(3,4-diethoxyphenyl)thiazole-4-yl]pyridine-2-carboxylic acid, for use in the treatment of inflammatory bowel diseases, such as ulcerative colitis. The compound protects gastrointestinal mucosal integrity against reactive oxygen metabolites (ROM). As a therapeutic agent for the treatment of a variety of oxidative inflammatory intestinal disorders characterized by an abnormal mucosal barrier, OPC-6535 is shown to prevent the oxidation and potently inhibit leukocyte superoxide production. See column two on page 296 where enema administration is disclosed to prevent the distruption of human intestinal barrier function.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chihiro et al., U.S. Patent 6,291,487.

Chihiro teaches the administration of 6-[2-(3,4-diethoxyphenyl)thiazole-4-yl]pyridine-2-carboxylic acid for use in the treatment of the inflammatory bowel disease, Crohn's disease. Intrarectal administration is disclosed in column 10, lines 19-20. The claims differ in that an enema preparation is not taught. However, in view of the teachings of Chihiro, and the documented knowledge that oxidative inflammatory intestinal disorders are characterized as having an abnormal mucosal barrier, one skilled in the art would have been motivated to prepare and administer an enema

Application/Control Number: 10/564,743 Page 6

Art Unit: 1614

preparation. Such would have been obvious in the absence of evidence to the contrary because it would have been reasonable to expect an enema formulation to provide a local affect to the disease process.

No claim is allowed.

Any inquiry concerning this communication or earlier communications from the Examiner should be directed to Phyllis G. Spivack whose telephone number is 571-272-0585. The Examiner can normally be reached on 10:30 AM-7 PM.

If attempts to reach the Examiner by telephone are unsuccessful, the Examiner's supervisor, Ardin Marschel, may be reached on 591-272-0718. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
